

**Bug list:**

Bug #	Description of Bug (be specific about what is not working)	Location of Bug (file, class, method, etc)	Steps to Recreate Bug and/or Test Case #	Root Cause Analysis Notes
1	When at least two candidates have same names, the system will not report error. Instead, the system counts all the ballots to one candidates, leading to an incorrect result.	Main function	At least two candidates have same names	System cannot distinguish candidates with same names.
2	When input more than one word in terminal, it just reads the first word. For example ./Vote_Counter examplefile.csv abc.csv It only reads examplefile.csv	Main function		When parse the argument, we may not handle all the situations
3	When voters give two primary ballot to two candidates, only first candidates will actually get the ballot.	Main function	Voters give two primary ballots to two candidates.	System will only record one ballot.
4	STV may not fully working at			

	this time
